

PRESS RELEASE

A+T Instruments showcase revolutionary wind instruments at METS.

The lightest, fastest and toughest solution to all boats when it comes to wind measurement, the A+T 500 Wind Series will have centre stage at METS, the major international marine trade show in Holland.

Offering 24/7 global support, A+T now stock vertical and horizontal configurations (both of which will be demonstrated at METS), complete units, upgrade service to existing sensors and stock spare parts available for same day shipping.

This series combines high performance and new design with also providing parts and spares for the widely used 213 sensor so saving the need to scrap the wind sensor, mast cable and in many cases the instrument system. A+T offer a solution to easily improve or replace the existing sensor.

The A+T Wind Series has the following benefits compared to the alternatives on the market:

- **Lighter**
- **Faster response** – please see our sensor comparison [video](#) and bearing comparison [video](#) with alternative model on the market.
- **Quick solution** – same day shipping and no need to replace mast cable.
- **Cost saving** – spare parts and service for existing 213 sensors.
- **Stronger** – Graphite infused main housing, stronger and better resistance to static electricity in lightning conditions.
- **Environmentally friendly** – no need to throw away old equipment with upgrade options available.

ENDS

Note to Editors

A+T Instruments Ltd is based in Lymington UK and was founded by Richard Tinley and Hugh Agnew. Richard has repaired and designed instruments for his whole career including providing official B&G service for 20 years. Hugh Agnew is a veteran yacht navigator and has built many navigation systems in the offshore, military and yachting markets. A+T combines this knowledge to design and manufacture, without compromise, the best engineered marine instruments all manufactured in the UK. A+T has no connection or affiliation with B&G/Navico
